What's Next?

Instrument Engineering

Bachelor of Science (Honours) in Instrument Engineering

Instrument engineers combine skills from a scientific and engineering perspective to become experts in measurement and analysis of data typically in advanced manufacturing sectors, such as BioPharma and Chemical industries, smart product manufacturing, IT hardware development, etc.

Instrument Engineers understand the fundamental principles of measurement and calibration using advanced scientific instruments, usually in a smart manufacturing environment. As an Instrument Engineer, you will be responsible for planning, installing, monitoring and maintaining control systems and machinery within advanced and traditional manufacturing environments. As instrument engineers work with control processes, you also may work in the design and development of new instrument-based products.

As a graduate, you will contribute significantly to the quality, safety and productivity of operating systems.

Transferable Skills

Measurement and Analysis

Critical thinking & problem solving

Logical & mathematical reasoning

Communications

Leadership & teamwork

Research, laboratory/ experimentation skills

Data analysis and report writing

Ethics & Professionalism.

Degree-specific Skills

Knowledge and understanding of theory, concepts and methods that apply to specialised areas of applied physics and instrumentation, and of relevant design standards and best practice.

Design, develop and implement measurement and control systems.

Manage, evaluate and critically analyse complex instrumentation and process control installations.

Specific knowledge and understanding of process industries, related service suppliers and system integrators.

Specify and use appropriate methodologies, technologies and skills to solve a range of problems in instrument engineering

 ${\it Manage \ continuous \ professional \ development.}$

Career Options

Instrument engineers work in a variety of industrial facilities that specialize in manufacturing, including the processing of food or chemicals, or in the utilities sector, such as oil and gas production, energy, including renewable, and water quality analysis. Design and development of new products that use sensors, such as medical device instruments or fire and safety detectors, is another career option, as is working in an engineering consultancy.

Instrument engineers are often involved in ensuring that the company meets statutory requirements, for example in **calibrating**, **managing** and **monitoring the instruments** used to measure emissions.

While the specific tasks of an instrument engineering job will depend on the control systems involved and the product being produced, **duties may include**:

- Installing new control processes
- Daily monitoring of sensor outputs and process operation
- Working with others to design and develop new control processes
- Developing testing protocols
- Ensuring instrumentation operation complies with quality parameters
- · Carrying out routine maintenance
- Troubleshooting issues
- Optimising processes to improve system efficiency
- · Data collection, analysis and report writing.

Manufacturing, chemical, and other industries with automated processes hire instrument engineers to optimize dependability, efficiency and productivity within their sites. **Employers of instrument engineers include**:

- Food and beverage processing plants (e.g. PepsiCo, Dairygold)
- Pharmaceuticals (e.g. Pfizer, MSD, Sanmina)
- Bio-technology and chemical processing plants (e.g. Regeneron, Jannsen, Lily)
- Other manufacturing /product development companies (e.g. ABEC, Alcon)
- Oil and gas refineries (e.g. Irving Oil)
- IT hardware manufacturing sites (e.g. Intel, Analog)
- Energy and water companies (e.g. Ervia, EPS)
- Aerospace (e.g. ESA ESTEC)
- BioMedical (Stryker, DePuy).

For further details, see the department of Physical Sciences website:

Starting Your Job Search

Job search takes focus, effort and commitment. It's essential that you create a strong online presence. You need to have a LinkedIn profile and work at building up your network. Be sure to include a link to your profile on your CV. We recommend that you visit a CIT Careers Advisor to get feedback and advice on your LinkedIn profile.

Search for companies/industries that interest you and aim to find a contact name on LinkedIn, for example, look for CIT Alumni (former graduates of your course and other engineering degrees) and ask them to connect with you. Follow people who are where you want to go, look back at their career journey and make connections! Don't wait for jobs to be advertised, actively work at presenting yourself for roles that interest you.

Graduate programmes are paid jobs and a good career starting point.
Often you get to rotate to different departments or sites, which gives you varied work experience in a short time. Register with GradIreland: www.gradireland.com

www.gradiretarid.com

Enterprise Ireland and the IDA (Industrial Development Agency) have lists of the companies, including multi-national companies in Ireland, and many employ instrument engineers. See: https://www.enterprise-ireland.com/en/Source-a-Product-or-Service-from-Ireland/Sector-and-Company-Directories/and www.idaireland.com

Where are CIT graduates working?

Company

Hanley Calibration
Janssen Biologics
Zenith Technologies

Qualcomm
Defence Forces
Irish Naval Service
SensL Technologies

DELL

Innovative Total Solutions and Cobots.ie

Irving Oil

ONT Automation
Zenith Technologies

Irish Defence Forces Naval Service

Naval Service

Rockwell Automation

Job Role

Instrument Technician
Maintenance Technician

Graduate Automation Engineer

Engineer IT Analyst

Naval Service Programmer

Product Engineer

Manufacturing Engineer

Application Engineer, Trainer and Technical Support Engineer

Graduate Engineer
Automation Engineer
Automation Engineer
Radio Technician

IT Technician

Graduate Automation Engineer

Professional Groups & Associations

Membership of a professional body is a useful way to meet new people in your field and will look good on your CV. Many professional bodies have jobs boards and these roles may not be advertised elsewhere. Relevant professional bodies include:

International Society of Automation: The Department of Physical Sciences works closely with the ISA and students are encouraged to join the association during their time in college. The ISA is a global network that offers major opportunities to meet professionals across a range of industry sectors. Students can participate in the ISA World Student Games (usually in Canada) and the ISA has an annual awards ceremony in Cork to recognise students and outstanding performance professionals nationally. Our students are frequently recognised at these awards. https://www.isa.ie/

Institute of Physics (IOP) in Ireland recognises your CIT honours degree and upon graduation you can apply for Associate Membership. IOP offers a range of professional development opportunities, which will contribute to your longer-term career success. IOP also has a Career Development Hub, an online resource to support members' career development. http://www.iopireland.org/

Engineers Ireland: The BEng (honours) in Instrument Engineering is fully accredited by Engineers Ireland for membership eligibility. It also runs programmes for graduates, such as, the Future Professionals Programme for graduates in their first job and includes mentoring. This graduate transition programme is run with employers and is accredited by TU Dublin.

Two additional professional bodies to investigate are:

- Institution of Engineering and Technology (IET)
- Institute of Measurement and Control (InstMC).

Postgraduate Study

You may wish to gain more specialised knowledge or achieve a specific technical, vocational or professional qualification via further study. For further information, go to the 'Further/Postgraduate Study' link on the Students page of our website:

http://www.mycit.ie/careers.

Examples of Masters' programmes include:

- Masters by Research at CIT's Centre for Advanced Photonics & Process Analysis (www.cappa.ie) or at the Tyndall National Institute (www.tyndall.ie)
- Advanced Engineering Materials, University of Limerick
- Biomedical Device Materials, University of Limerick
- Digital Health and Medical Technologies, DCU & RCSI.

The SUSI grant may be available when you are progressing your education to level 9. For information on Masters' programmes taught through English in universities across the EU, see: www.mastersportal.eu

Going Abroad

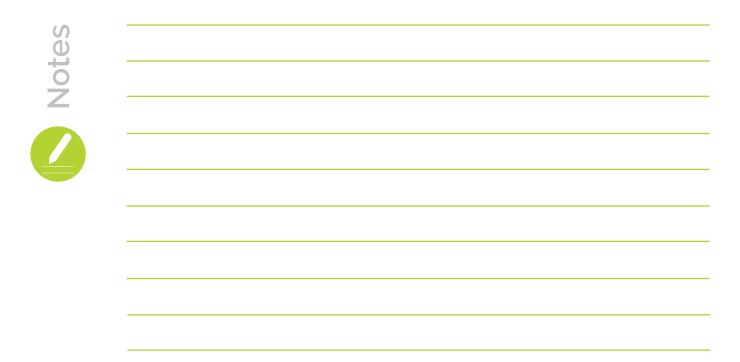

For career opportunities with companies in the UK see: www.targetjobs.co.uk; www.gradjobs.co.uk and www.graduate-jobs.com

Jobs across the EU can be seen on the EURES website and financial supports are available for relocating to another EU country, visit:

https://ec.europa.eu/eures/eures-searchengine/page/main?lang=en#/search

If you wish to work in the USA, Canada or Australia, check out work visa requirements first. There are graduate work visas available to the USA, a great opportunity to gain global experience in your field. Article worth reading – Job Profile: Control and Instrumentation Engineer:
